Web 2.0

The Web 2.0 describes a new generation of [internet](#), [intranet](#) et [extranet](#) websites. It is not a specific technology, but rather a concept that illustrates the evolution of the Web. From now on, compared to what we could actually call "Web 1.0", Websites content is mostly generated by users. With Web 2.0 interactivity is the cornerstone of websites.

It is not a new technological standard, but a set of rules concerning the use of existing technologies. From this point of view, [LightStorm](#) is an application fully compliant with the concept of Web 2.0.

NEXINT developers have appropriated themselves existing technologies to create an ergonomic interface for users: if it's revolution it is in the use of technology, not a revolution of technologies. All this for a unique goal, achieved by LightStorm: the creation of a genuine human network of collaborators, customers, members of associations, and so on. , Contributing to the generation of structured and divided content.
